

Bottled Water

Key features

- ✓ Suitable for all natural water sources
- ✓ Significantly lower price per m³ water cleaned than similar solutions
- ✓ All in one solution
- ✓ Excellent Capacity-OPEX ratio
- ✓ All inclusive service agreement
- ✓ Attractive leasing and pay per use contracts

Bottled drinking water labeled,
wrapped and ready to stack

Company info

Sunstone Water Group is an international engineering company that specializes in the development and production of patented and innovative mobile water purification systems for waste water and drinking water.

We are domiciled in Vejle, Denmark where our Clean Water Units (CWU) are produced based upon the needs and desires of the individual customer.

All projects are unique, and solutions from Sunstone Water Group are adapted to individual needs using a broad selection of standardized purification modules – perfect for combining depending on individual needs. All components have been carefully selected for purposes of ensuring a high level of quality and the lowest life-cycle costs on the market.

All in one solution

Our mobile water treatment systems are module based and built into a single container. The CWU can be installed practically anywhere and drinking water can be produced from ANY natural source such as groundwater, lakes, rivers, brackish water or seawater.

Our system is able to remove different kinds of dissolved salts, metal ions, color, smell, bacteria, viruses and organic matter.

The all in one solution provides you with bottled drinking water labeled, wrapped and ready to stack on pallets and offers a capacity from 4.000 bottles/hour.
